

AICHA ATKI

Software Engineering Student

aatki@student.1337.ma

0629328237

Morocco

PROFILE

Dedicated student at 1337 School (42 Network), currently at Level 18.20. Rigorous problem solver with hands-on experience in C, C++, and System Architecture. Proven ability to learn autonomously and collaborate in peer-to-peer environments.

EXPERIENCE

First Internship

Jan 2026

[Company Name](#)

Validated internship as part of the 42 curriculum. Demonstrated professional competency and technical skills in a real-world environment.

SELECTED PROJECTS

gomoku

Aug 2026

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

Learn2Slither

Aug 2026

Technical project validated with 101% score focusing on algorithmic efficiency and code quality.

dslr

Jul 2026

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

EDUCATION

1337 School (42 Network)

Computer Science

2022 - Present

Level: 18.20

Campus: Benguerir

TECHNICAL SKILLS

Git

Web

Docker

Graphics

Algorithms

Linux

C++

Shell

C

JavaScript

LANGUAGES

C, C++, Python, Shell

TOOLS

Git, Docker, Vim, Linux

LANGUAGES

English

Advanced

French

Intermediate

Arabic

Native

matrix May 2026

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

ready set boole May 2026

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

music-room May 2026

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

TokenizeArt Mar 2026

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

Inception-of-Things Mar 2026

System Administration project setting up a Docker-based infrastructure with Nginx, WordPress, and MariaDB.

Tokenizer Mar 2026

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

ft_linear_regression Jan 2026

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

Work Experience I - Peer Video Jan 2026

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

Work Experience I Jan 2026

Technical project validated with 124% score focusing on algorithmic efficiency and code quality.

Work Experience I - Company Final Evaluation Sep 2025

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

Work Experience I - Company Mid Evaluation Jun 2025

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

Work Experience I - Duration Mar 2025

Technical project validated with 118% score focusing on algorithmic efficiency and code quality.

Work Experience I - Contract Upload Mar 2025

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

ft_transcendence Jan 2025

Built a full-stack real-time Pong game with chat, matchmaking, and OAuth using NestJS and React.

ft_irc Apr 2024

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

Inception Mar 2024

System Administration project setting up a Docker-based infrastructure with Nginx, WordPress, and MariaDB.

CPP Module 09 Jan 2024

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

CPP Module 08 Jan 2024

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

CPP Module 07 Jan 2024

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

CPP Module 06 Jan 2024

Technical project validated with 80% score focusing on algorithmic efficiency and code quality.

CPP Module 05 Jan 2024

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

CPP Module 04 Nov 2023

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

CPP Module 03

Nov 2023

Technical project validated with 80% score focusing on algorithmic efficiency and code quality.

CPP Module 02

Nov 2023

Technical project validated with 80% score focusing on algorithmic efficiency and code quality.

CPP Module 01

Nov 2023

Technical project validated with 85% score focusing on algorithmic efficiency and code quality.

CPP Module 00

Nov 2023

Technical project validated with 80% score focusing on algorithmic efficiency and code quality.

cub3d

Oct 2023

Implemented a 3D game engine using Raycasting (Wolfenstein 3D style) and MiniLibX.

NetPractice

Aug 2023

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

Philosophers

Jul 2023

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

minishell

Jun 2023

Recreated a fully functional Unix shell (Bash) in C. Handled parsing, execution, pipes, and signals.

pipex

Mar 2023

Technical project validated with 120% score focusing on algorithmic efficiency and code quality.

push_swap

Feb 2023

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

so_long

Jan 2023

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

Born2beroot

Nov 2022

Technical project validated with 110% score focusing on algorithmic efficiency and code quality.

get_next_line

Nov 2022

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.

ft_printf

Nov 2022

Technical project validated with 100% score focusing on algorithmic efficiency and code quality.

Libft

Oct 2022

Technical project validated with 125% score focusing on algorithmic efficiency and code quality.
