PROFILE

Machine Learning and AI student at 42 Network with a strong foundation in software engineering and algorithms. Experienced in building intelligent systems ranging from reinforcement learning agents and neural networks to BCI data processing. Aspiring to specialize in Brain-Computer Interfaces and neurotechnology.

EDUCATION

42 Network – Computer Science 2022 – Present

Project-based program focusing on algorithms, systems programming, and AI development.

Polydisciplinary Faculty of Safi – DEUG in Mathematics & Computer Science (SMI) 2019 – 2022

Lycée Jaber Ibn Hayan – Baccalauréat in Mechanical Engineering 2019

EXPERIENCE

Darkey – Founder & Mobile Developer Present

Flutter – Supabase – AI-Assisted Development

- Developing a rental discovery mobile application using Flutter and Supabase backend services.
- Utilizing AI-assisted workflows to accelerate prototyping, system architecture implementation, and iterations.

Backend Development Internship

Django – Python – REST APIs

- Built production backend APIs using Django, focusing on RESTful architecture and database management.

PROJECTS

Total Perspective Vortex – BCI (*Python, Brainwave Data*)

Processed high-dimensional brainwave signals to map EEG data into machine control commands for BCI applications.

dslr – Data Science Logistics Regression (*Python, Data Analysis, Machine Learning*)

Implemented a Hogwarts House sorting classifier using Data Science and Logistic Regression from scratch, including exploratory data analysis (EDA), feature visualization, and One-vs-All gradient descent classification.

ft_linear_regression (*Python, Machine Learning*)

Built a single-variable linear regression model from scratch using gradient descent to predict car prices based on mileage, featuring data normalization and cost function visualization.

Learn2Slither – Reinforcement Learning (*Python, Q-Learning*)

Built a Q-learning agent with custom state representation and ϵ -greedy exploration to master a Snake environment.

Multilayer Perceptron (*Python, Neural Networks*)

Implemented a neural network from scratch including forward propagation, activation functions, and backpropagation.

Gomoku AI (*C++, Minimax, Heuristics*)

Developed an adversarial search agent in C++ using Minimax with customized heuristic board evaluation.

ft_transcendence (*React, NodeJS, PostgreSQL, OAuth*)

Built a full-stack real-time multiplayer platform featuring live chat, matchmaking, and OAuth security.

TECHNICAL SKILLS

Languages: Python, C, C++, JavaScript, Shell, SQL

AI/ML: Neural Networks, Reinforcement Learning, Q-Learning, Data Analysis, Minimax Search

Frameworks & Tools: Django, Flutter, Supabase, React, NodeJS, Docker, Linux, Git, REST APIs

LANGUAGES

Arabic | English | French

INTERESTS

Brain-Computer Interfaces, Neurotechnology, Artificial Intelligence
